■ **Yongyi's National Competition** ■
Sprint Round
Problems 1–30

Name _____

State _____

**DO NOT BEGIN UNTIL YOU ARE
INSTRUCTED TO DO SO.**

This round of the competition consists of 30 problems. You will have 40 minutes to complete the problems. You are not allowed to use calculators, books, or any other aids during this round. If you are wearing a calculator wrist watch, please give it to your proctor now. Calculations may be done on scratch paper. All answers must be complete, legible, and simplified to lowest terms. Record only final answers in the blanks in the right-hand column of the competition booklet. If you complete the problems before time is called, use the remaining time to check your answers.

In each written round of the competition, the required unit for the answer is included in the answer blank. The plural form of the unit is always used, even if the answer appears to require the singular form of the unit. The unit provided in the answer blank is the only form of the answer that will be accepted.

Total Correct	Scorer's Initials

1. In a field of 108 aliens, each alien has either 5 heads or 103 heads. If I counted 1030 heads in total, how many aliens have 103 heads? 1. 5 aliens
2. A supermarket advertised a sale of 75% off, and afterwards, the price of a pen was \$4. What was the original price of a pen before the sale? 2. \$ 16
3. In a right triangle, the two legs have lengths of 65 and 72. What is the length of the hypotenuse? 3. 97
4. In the expansion of $(x + 1)^{20}$, what is the coefficient of x^{19} ? 4. 20
5. In a school, the ratio of boys to girls is 3 : 5. After 20 more boys attended the school, the ratio is now 1 : 1. How many girls are in the school? 5. 50 girls
6. In a row of 10 seats, in how many ways can I choose two seats that are not next to each other? 6. 36 ways
7. If I roll a standard 6-faced die three times, what is the probability that I roll at least one 6? Express your answer as a common fraction. 7. $\frac{215}{216}$

8. In a circle with radius 13, two parallel chords with length 10 are joined to create a rectangle. Find the area of this rectangle.

8. 240

9. Find the number of real solutions to the equation $x^3 + 89x + 2008 = 0$.

9. 0 solutions

10. Find the volume of the largest regular tetrahedron that can be inscribed in a cube of side length 2, as shown below. Express your answer as a common fraction.

10. 8/3

11. How many numbers from 1 to 20 inclusive must be on a blackboard before the probability of two of them being the same is greater than $1/2$?

11. 6 numbers

12. I start at my house and flip a coin. If it lands heads, I walk exactly one meter east. If it lands tails, I walk exactly one meter west. Once I return home, I stop flipping coins. What is the probability that I return home after four flips? Express your answer as a common fraction.

12. 1/8

13. Find the number of degrees the hour hand travels on a 12-hour clock between 1:23 P.M. and 6:11 P.M.

13. 144 degrees

14. Two trains are traveling toward each other at opposite ends of a 200-mile track. One travels at 60 miles per hour and the other travels at 90 miles per hour. If the slower train starts at 9:00 A.M. and the faster train starts at 9:30 A.M., at what time will the two trains collide?

14. 10:38 (AM)

15. Edit: this problem is much more advanced than MathCounts level as stated. Please ignore this problem. See <http://mathworld.wolfram.com/DiskLinePicking.html>.

15. Any answer

16. How many isosceles triangles can be formed by connecting three vertices of a cube?

16. 32 isosceles triangles

17. How many three-digit numbers fit the property that the second digit is greater than or equal to the first digit and the third digit is greater than or equal to the second digit?

17. 165 numbers

18. Sally folds an 8.5×11 sheet of paper in half either horizontally or vertically, keeping the minimum possible perimeter, four times. What is the perimeter of the resulting rectangle? Express your answer as a decimal to the nearest thousandth.

18. 4.875

19. What is the y-intercept of the line perpendicular to $y = 2x + 3$ at the point $(3, 9)$? Express your answer as a common fraction.

19. $21/2$

20. A sequence begins with 1, 4, 7, ... Another sequence begins with 99, 95, 91, ... At which position is the positive difference between the respective terms of the two sequences the minimum?

20. 15

21. Given that $a + b = 29$ and $a - b = 10$, find the minimum value of $a - b + c$. Express your answer as a common fraction.

21. -7/10

22. The word value of a word is the sum of the values of its letters, where A = 1, B = 2, C = 3, D = 4, etc. For example, the word value of CAR is $3 + 1 + 18 = 22$. How many four-letter "words" exist whose word value is 28? "Words" need not be real English words.

22. 2925 words

23. The rule in the Jungle of Nool is that every twenty years, each pink bunny gives birth to a brown bunny and every brown bunny gives birth to a pink bunny and a brown bunny. In 2000, the only pink bunny in the Jungle of Nool gave birth to a brown bunny. If bunnies die immediately after giving birth, how many bunnies will be born in the Jungle of Nool in 2100?

23. 13 bunnies

24. If $(2 + 3 + 1)$ is not defined, find $a + b$. Express your answer as a common fraction.

24. -4/13

25. Given that $a = 3$, find the value of 2 .

25. 18

26. First, six cards are drawn from the top of a standard 52-card deck and placed flat on a table. Next, two cards are randomly chosen from those six cards. What is the probability that at least one of them will be a spade? Express your answer as a common fraction.

26. 15/34

27. A regular octagon is inscribed in a circle and another regular octagon is circumscribed about the same circle. Find the ratio of the area of the smaller octagon to the area of the larger octagon. Express your answer as a common fraction in simplest radical form.

27. $\frac{\sqrt{2}}{2}$

28. Two polygons, not necessarily distinct, are randomly chosen from a list of regular polygons of side length 1, from 3 sides to 12 sides, inclusive. What is the probability that they will tessellate the plane? Express your answer as a common fraction.

28. 11/100

29. A time is reducible if the hour and minute share a common factor greater than 1. For example, 9:15 is reducible because they share a common factor of 3, but 8:27 is not. How many reducible times are there between 12:00 A.M. and 12:00 P.M.?

29. 262 reducible times

30. An army of soldiers, which is a square measuring 50 feet by 50 feet, marches north at a constant rate of 1 foot per second. The mascot, a dog, starts at the south end of the square and runs at a constant speed to the north end and back to the south end. If this takes exactly 2 minutes, what is the rate at which the dog ran, in feet per second? Express your answer as a common fraction.

30. 3/2 ft/sec

Target Round
Problems 1 and 2

Name _____

State _____

**DO NOT BEGIN UNTIL YOU ARE
INSTRUCTED TO DO SO.**

This section of the competition consists of eight problems, which will be presented in pairs. Work on one pair of problems will be completed and answers will be collected before the next pair is distributed. The time limit for each pair of problems is six minutes. The first pair of problems is on the other side of this sheet. When told to do so, turn the page over and begin working. Record only final answers in the designated blanks on the problem sheet. All answers must be complete, legible, and simplified to lowest terms. This round assumes the use of calculators, and calculations may also be done on scratch paper, but no other aids are allowed. If you complete the problems before time is called, use the time remaining to check your answers.

Total Correct	Scorer's Initials

1. Bob writes the list of numbers from 1 to 99 without breaks, starting with 12345678910111213... on a sheet of paper. Aidan writes the list of numbers from 99 to 1 directly underneath Bob's list, starting with 99989796959493... A scanner starts at the left edge of the paper and runs to the right. When the scanner finds the same digit in both lists, it beeps. How many times will the scanner beep before it reaches the right edge of the paper?

1. 17 times

2. Seven identical coins are weighted such that when all of them are flipped, the probability of two of them being heads is twice the probability of three of them being heads. When one of these coins is selected and flipped once, what is the probability that it will come up heads? Express your answer as a common fraction.

2. 3/13

3. How many lists consisting of seven numbers have the property that the median is 11, the mean is 12, and the mode is 13?

4. In solving the quadratic equation $x^2 + px + q = 0$, Bob made an error, solved $x^2 + px + r = 0$, and got the roots $\frac{\sqrt{r}}{p}$ and $-\frac{\sqrt{r}}{p}$. Alan made an error, solved $x^2 + px + s = 0$, and got the roots -1 and $5/6$. Xiaoyu made an error, solved $x^2 + px + t = 0$, and got the roots $-3 + \sqrt{14}$ and $-3 - \sqrt{14}$. What were the original roots of the equation? Express your answer as an ordered pair.

4. (2 , 3)

3. 120 lists

Total Correct	Scorer's Initials

5. In reducing the fraction $\frac{1}{6}$, Runpeng wasn't concentrating properly and canceled out the 6's to get $\frac{1}{4}$. Miraculously, that was equivalent to the original fraction! Let fractions like this be

called "interesting fractions." In addition, an

interesting fraction cannot have 0's in its numerator or denominator and its value must be less than 1. How many interesting fractions have two-digit numerators and denominators? Note that the fraction does not have to be in simplest form after "reducing."

6. Three positive real numbers a, b, c satisfy the equation $\frac{a}{b} + \frac{b}{c} + \frac{c}{a} = 3$. What is the minimum possible value of $\frac{a}{b} + \frac{b}{c} + \frac{c}{a}$?

6. 81

5. 4 fractions

7. How many sets containing three numbers exist that consist of distinct integers from 2 to 10 and whose elements all share a common factor greater than 1? The set $\{4, 6, 10\}$ is an example of such a set, while $\{5, 7, 10\}$ is not.

7. 11 sets

8. A 10-foot wide hallway intersects a 6-foot wide hallway in the corner of a building. What is the maximum length, in feet, of a pole that could be carried past the corner without tilting it? Assume that the width of the pole is zero and express your answer as a decimal to the nearest hundredth.

8. 22.39 feet
